Course Manager

## Romford Golf Club at a glance

Led by Course Manager Antony Kirwan, Romford Golf Club has used Maxstim Sport and Cynosa for four seasons across its greens and approaches.

### Course Manager

Antony Kirwan

### Time at Romford

8.5 years

### Industry Experience

36 years

### Using Maxstim

4 seasons

### Application Area

Greens and approaches, 1.1 ha across 18 holes

## Maxstim Sport & Cynosa

A straightforward biological input designed to support stronger, more resilient turf.

- ✓ Greater root mass and depth
- ✓ Improved chlorophyll and colour
- ✓ Stronger drought resilience
- ✓ Improved recovery from stress

## The challenge and why Maxstim was introduced

The greens were suffering from shallow rooting, making the playing surfaces more vulnerable to drought stress and drying out. Antony already had a strong practical agronomy programme in place, but wanted to introduce Maxstim as the biological input that would complement and support his ongoing maintenance programme.

## Integrating Maxstim into the maintenance programme

Maxstim was straightforward to integrate into Antony's existing maintenance programme. Maxstim Sport is applied at 20 L/ha every fortnight, alongside Maxstim Cynosa at 2 L/ha each month. Both products fit easily into the established spray schedule, with no issues around tank mixability.

## THE RESULTS

# A stronger root system and more consistent playing surfaces

### Q1 What problems were you trying to solve when you started using Maxstim?

The initial trial set out to combat shallow rooting, improve consistency across the playing surfaces and reduce the impact of drought stress.

### Q2 What results have you seen since starting the Maxstim programme?

We have seen an overall 50% increase in root development and root mass. This was evident within a few months: we measured depth and shoot development during the first summer of application. We also witnessed improved chlorophyll and colour, which helped me adopt Maxstim into the programme.

### Q3 Have you seen changes in disease or stress levels on your greens?

There have been no direct changes to disease, but recovery has improved significantly.

• Hole core shows well-developed structure

• Core shows enviable root development

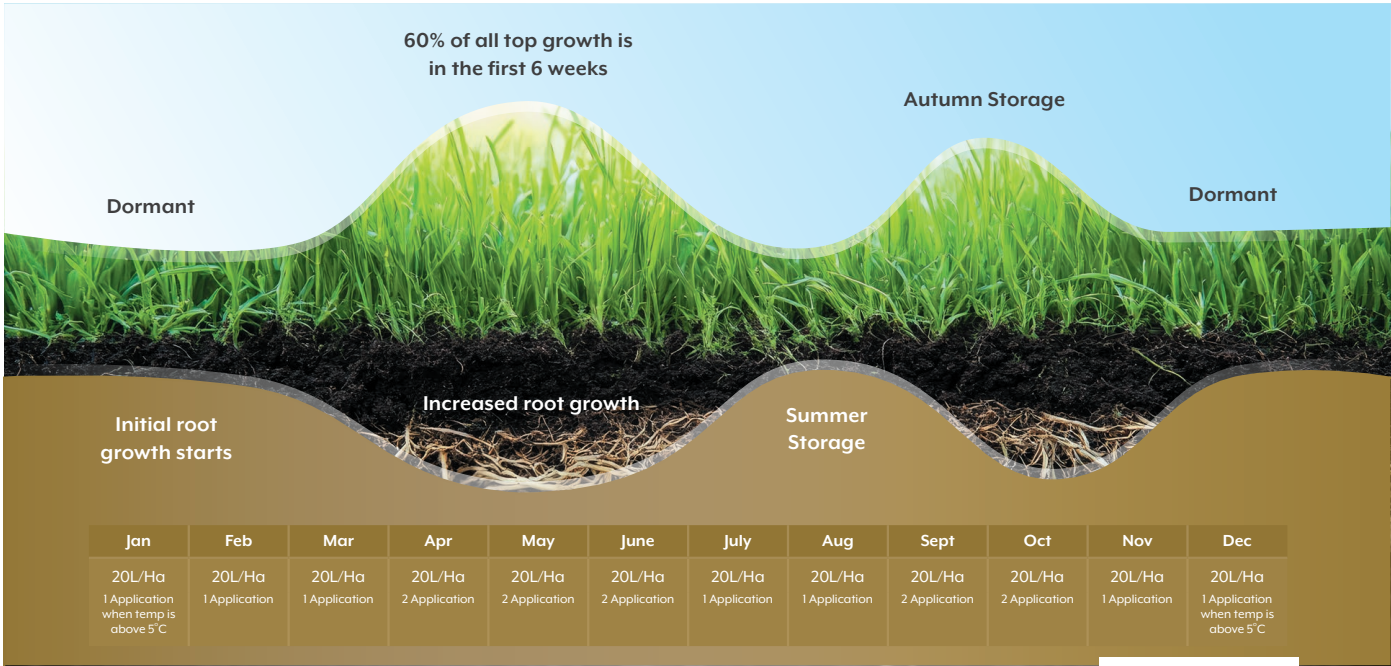

• Healthy greens now with impressive recovery capabilities

### Q4

Would you recommend Maxstim to fellow greenkeepers?

**“Yes, I would. Maxstim offers great value for money and has been a cost-effective addition to our maintenance programme. We’ve been really pleased with the results.”**
